SUMMARY

Entry-level AI Engineer focused on building AI agents, LLM-powered applications, and automated business workflows. Experienced with Python, FastAPI, n8n, LLM integrations, RAG, APIs, and automation workflows. Built practical AI systems for recruitment, document processing, lead qualification, content automation, and AI-powered productivity. Currently developing deeper expertise in agentic AI, RAG, machine learning, and full-stack AI application development.

EDUCATION

The University of Faisalabad (TUF)

Bachelor of Science in Software Engineering, CGPA: 3.39, Relevant Coursework:, Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Software Requirements Engineering, Operating Systems, Software Engineering 2024 – Present

Saylani Mass IT Training Program (SMIT)

Agentic AI Architect / Engineer Program, Training areas include:, Programming Foundations for AI, AI Foundations, Prompt & Context Engineering, LLM Application Development, AI Agent Development, Multi-Agent Systems, AI-Native Development, AI System Design, AI Infrastructure & DevOps, Capstone AI Engineering

PROJECTS

AI Recruitment Application Agent | n8n | LLM | Automation | Email | Data Processing

- Built an automated recruitment workflow that processes candidate applications and evaluates candidates using AI.
- Designed an AI-based prioritization system to classify applications according to configurable recruitment criteria.
- Automated candidate data storage and email communication.
- Connected forms, AI processing, data storage, and notifications into an end-to-end workflow using n8n.
- Reduced repetitive manual screening and demonstrated how LLMs can be integrated into real business workflows.

DocuVision — Intelligent Document Processing System | n8n | OCR | LLM | Document Automation

- Built an automated document-processing workflow using n8n.
- Designed a pipeline for receiving documents, extracting information, processing content with AI, and generating structured outputs.
- Integrated document processing and AI components into an automated workflow.
- Focused on turning unstructured documents into usable business information with minimal manual intervention.

AI Lead Qualification Agent — KohinoorAgent | n8n | LLM | Lead Qualification | Automation

- Developed an AI-powered lead qualification workflow for a label manufacturing business.
- Automated the analysis and qualification of incoming leads based on business requirements.
- Used AI to extract relevant information and determine lead quality.
- Designed the workflow to reduce manual lead screening and improve sales-team efficiency.

AI-Powered LinkedIn Content Automation | n8n | LLM | Image Generation | Automation

- Built an end-to-end content automation system for generating and managing LinkedIn content.
- Automated content planning, post generation, hashtag generation, image-prompt creation, and content delivery.
- Integrated LLMs and image-generation APIs through automated n8n workflows.
- Implemented a content-management workflow capable of maintaining a multi-day publishing plan.

- Designed the system as an autonomous workflow rather than a simple content-generation script.

Prof Mentor — AI Roadmap & Mentoring Application | AI | LLM | Web Application

- Built an AI-powered application designed to help users plan and navigate technical learning paths.
- Developed an AI mentor concept capable of generating personalized learning guidance.
- Designed the application with potential SaaS capabilities including authentication and personalized AI roadmaps.
- Combined AI functionality with a web-based application interface.

AI Cost Estimation Multi-Agent System | AI Agents | LLM | Multi-Agent Architecture

- Designed an agentic AI workflow for estimating project costs.
- Applied multiple specialized AI agents to break a complex estimation problem into smaller tasks.
- Focused on structured agent communication, task delegation, and generation of a consolidated estimate.
- Demonstrates practical understanding of moving from single LLM calls toward agent-based architectures.

Interview Management System | C++ | Data Structures & Algorithms

- Developed an interview management system using priority-based scheduling.
- Applied data structures and scheduling concepts to manage interview candidates efficiently.

Rural Development Management System | PHP | MySQL | DBMS

- Developed a database-driven management system for organizing rural development activities.
- Implemented database operations and application-level functionality using PHP and MySQL.

Kisan AI | Software Requirements Engineering | AI Concept

- Designed requirements and system specifications for an AI-oriented agricultural solution.
- Applied software engineering principles to define system functionality and requirements.

TECHNICAL SKILLS

Programming: Python, C++, JavaScript

AI & LLM: LLM Applications, Prompt Engineering, RAG, AI Agents, Agentic AI, Context Engineering

AI Frameworks: LangChain, LangGraph, FastAPI, Pydantic

Automation: n8n, Workflow Automation, API Integrations, Webhooks

Machine Learning: Scikit-learn, Pandas, NumPy, Matplotlib, Data Preprocessing, Regression

Backend: Python, FastAPI, REST APIs

Frontend: HTML, CSS, JavaScript, React, Vite, Tailwind CSS

Databases: MySQL, PostgreSQL, SQLite

Tools: Git, GitHub, Postman, VS Code

Other: OCR, PDF/DOCX Processing, Google Gemini, Groq, Hugging Face

AI Agent Development

Business Workflow Automation

LLM API Integration

RAG Application Development

AI-Powered Backend Development

REST API Integration

Prompt & Context Engineering

Multi-Agent Systems

Document Intelligence

AI Workflow Design

Problem Solving

Software Engineering Fundamentals
